When the *dho golo onyimbo* had been paid the bull and the heifer —the *dho dier*—chosen by the bride's brothers after the mock battle outside the bridegroom's *dala* were sent over by the bridegroom. If, after the *dho dier* had been received, the marriage was broken off by the bridegroom he had to pay compensation to the bride's father for the meat and beer consumed at the feast of the *tero nyako*, and he was also bound to pay one bull for the loss of the girl's virginity. Even if the girl, or her father refused the marriage at this stage, the bridegroom was still bound to pay this bull. 584 586

With the payment of the *dho dier* what may be regarded as the ceremonies of the betrothal were completed, and the marriage process entered on a new stage. 585

The stage was marked by various presents of cattle made by the bridegroom to certain of his future relatives. He gave a number (sometimes as many as fifteen) known as the *dho ikeny*, to the bride's full brothers. If she had no brothers the *dho ikeny* passed into the possession of her mother who might, if she wished, allow them to be used in the payment of bride-price for one of her husband's sons by another wife. (In this case the young wife was expected to treat her step-mother-in-law as she would treat her own husband's mother, and to help her in the fields and the home.)

In addition to the *dho ikeny*, the bridegroom sent a bull and a heifer (the *dher wuon nyako*) to the bride's father, and another bull and heifer (the *dho jochiemo*) to her uncles on the father's side.

Finally a cow and a calf (the *dher min nyako*) were sent to the bride's mother. These, with their offspring, became her absolute property. She could, if she chose, use them to contribute towards the payment of bride price for her sons, or equally could refuse to allow them to be used in this way. After her death they were inherited by her youngest son. 585 422 428

When all these had been handed over, and it should be noted that they were, apparently, conventional payments, made without question or discussion so long as they were within the means of the parties concerned, like our own engagement rings and wedding presents, then the discussions began about the number of cattle to be paid over in return for the transfer of the girl from one family to another—the true bride price itself. I believe that in some parts the number to be paid over was settled by discussion between the heads of the two families before the girl had been ceremonially captured. But the elders at Nyahera told me that there the custom was that the bridegroom conducted the discussion with the bride's father himself at this much later point. 583 585

He went over himself to the bride's *dala*, accompanied by his brothers and friends to the number of fifteen or sixteen, and taking

241 common to allow some of the sturdier roots to spring up again and give a second crop. I have seen some very fine heads of grain as a result of this method.

251 The crop is stored, unthreshed if millet or maize, in large basket-
578 like receptacles, covered with thatch and standing on stones or supported on forked sticks across which a rough platform is made. It is the work of the man to prepare the grain stores, and I suppose that there is no more prolific source of domestic bickering than these supply. Some men are shiftless, and leave off the preparation of the stores until near to harvest, sometimes exhausting in so doing the patience of the wife. Or he may be neglectful, and leave the thatch unrepaired, rendering the grain liable to suffer from the weather. Many women would far rather see the living hut left in disrepair than that the grain should be imperilled.

251 The store varies in size according to the grain for which it is
285 intended. The large size is for millet and maize, the small for the small millet and simsim. The Luo name for them is " dero." The large sizes run up to six feet high by about six feet in diameter. The small about four feet by three. They are made from swamp reeds built in a very coarse basket work fashion, and are finished off with a coating of cow dung inside. The better made stores have provision for access to the grain, by the simple device of cutting away a section from the top of the side, just under the thatch. It used to be the
[431 custom for a present of a small basket of grain to be given to the
791] Jabilo or medicine man, after harvest. This custom has already died out in many places.

241 It was the woman's first care to secure seed for the next year.
462 Millet and maize was hung in the head, sometimes outside from the branch of a tree, more frequently from the roof of the hut. Smaller grain, and beans were stored in pots in the living hut, and to ensure their being kept in good condition, it was the woman's duty to empty the contents of the pots periodically onto a " thigo " or large circular flat basket work tray, or some part of the courtyard swept clean, that the sun might keep them dry. Lack of seed, owing to a planting dying off from lack of rain was a serious matter. Seed was then begged from neighbours more fortunate.

● 422 Not all the grain went into the common store, for all the cultiva-
593 tion was by no means the common united effort of all the members of the family. The main effort of the members was put into the fields from which all were to draw their food supply, but in addition individual members had their own plots which are called " mondo." The head of the family would have his own " mondo," and the grain from this went into a separate store. This grain formed a reserve in

422 case of the main store being depleted. Grown up unmarried sons
513 and also daughters could have each his or her own " mondo." In case of necessity their grain went into the family store, but from it they were allowed to barter grain for the personal ornaments which were common in the tribe. Grain which was still in store when the new crop came in was at the disposal of the woman, who frequently
[437] used it in barter for domestic animals. This custom is called " rundo," and the beast procured, if a cow or heifer is called " dher tekre." It was the woman's own property, subject to the limitations of absolute ownership which pertain to all notions of property among primitive peoples. It could not be bequeathed away from her by her husband. In case of famine she could take of its offspring and barter it for grain. Once having acquired the beast she did not readily part with it, but kept it for her children.

731 As at the present day so also in days gone by, there was no tribal organization of food supplies as a provision against famine. During the last two or three years when crops have been short through damage by locusts there has been one word which was heard very frequently. The word is " kisuma." It means to journey away from the home locality in search of food for the family. In days gone by domestic animals were taken to those who had food to dispose of, and bartered for grain. A man without stock would marry off his girl child, and with the cattle get food. This was the only way in which famine conditions were met. Needless to say when famine was widespread, very much suffering was entailed.

242 Rotation of crops is practised to a limited extent. The order of rotation is decided largely, by the period of the year in which the first crop is put down. If virgin or fallow land is prepared for the autumn sowing, then the first crop is one which ripens quickly, such as simsim or beans. When this is harvested, the land will be put under a slower growing crop, like millet or maize. Before being allowed to revert to fallow land, it may be put under sweet potatoes. If the land is first prepared for the spring sowing then the order is reversed. But it must not be taken that what has been written above is the invariable rule. I have known a field to be put down first in sweet potatoes and then followed by a second crop of potatoes before being planted with maize. Also where the land is very rich, as in certain valleys, year after year maize or millet may be put down until the land shows signs of exhaustion. It then reverts to fallow. There is no strict rule governing the length of time it rests. Some allow a rest of three, some of five, years. It depends upon the amount of land available and the pressure of population upon it.

The names used by the Luo for the different phases are as follow:— Virgin soil, " Okang." Land under rotation, " Tiang." Fallow

Besides dowry payments the Luo had other means of obtaining cattle before the advent of the Europeans. Two of these ways, which no longer exist, were the capturing of enemies' cattle during inter-tribal wars and robbery during the night. Because there were only few cattle in those days the number of cattle paid for dowries was very limited, not even half of what it is today.

Inheritance and exchange are now the natural means by which the Luo obtain cattle. As mentioned above in discussing dowry the first eight to twelve cattle paid for a dowry, though nominally known as the property of the father of the girl, are in the real sense the inheritance of her full brothers. The father can do anything he likes with them during his life-time, provided he consults the girl's eldest brother. It frequently happens that there is disagreement between the sons and the father, who may try to dispose of these animals without consulting the sons. The other animals belong to certain individuals, e.g., father, uncles and mother. Those of the father if he is a polygamist are inherited by one of his sons who has no sisters. If the father has two or more sisterless sons born of different mothers they inherit equally the special cattle he gets from the dowry of those daughters who have full brothers. These sons also inherit the cattle, goats or sheep that he gets by other means, e.g., those obtained by exchanging millet or maize and those paid to him for the dowries of his nieces. Cattle paid to the mother-in-law by her son-in-law are inherited by her eldest or last son. Usually a father gives more to a son whose mother has died if he is a good son. He calls this son his orphan. If a father loves one of his sons more than the others he may take some of his cattle to one or other of his friends, and tell him that they can only be taken after his death by the loved son.

A man inherits his brother's animals if the brother dies and leaves no son. If a man, having a brother, dies before having children by his wife, and the widow marries someone else of her husband's clan, children born to her by her new husband belong to the brother of her former husband, and so, if they are girls, the brother inherits most of the cattle paid for their dowries. If, however, these girls have a brother, he inherits the cattle.

Some people start to obtain cattle by exchanging their millet or maize for sheep, goats and poultry in the first instance, and when the number of these small stock has increased, they, in turn, are exchanged for cattle. Sometimes a man gives his friend an assurance that if he gives him some goats he will in return give a heifer which can be kept until she calves. After weaning, the calf remains the property of the friend while the cow is returned.

to his home and continue to live in the *simbe*, the bride not cooking on her own, but in the verandah of her mother-in-law's hut, and her food not being eaten by her husband (who continues to eat his mother's food) but only by the young men. Later still the ceremony of *rim* is performed, which is considered a final confirmation of the marriage contract by the two families. However, further ceremonies follow, in which the husband gives his father-in-law the bull of *ailak* and his mother-in-law the goat of *awe nimako*. Then the father-in-law settles upon his daughter the heifer of *simbe*, a bull, two goats, and a hoe, in token that he now gives up all claim upon his daughter as long as the marriage continues. Eventually husband and wife move out of the *simbe* into a new hut built for her by him, and she begins to cook on her own and he to eat her food. The sequence of ceremonies associated with marriage is thus complicated and protracted. There is no specified time schedule, but the bride may have given birth several times before they are concluded.

Less prestige attaches to the form of marriage contracted by a man and woman without prior formal approval from their respective families. This occurred in the past if a girl was made pregnant in the *simbe* and was sent straight to her lover, or on the elopement of a married woman with her adulterer, or on the remarriage of a divorced woman. This type of marriage is becoming very common today, when adherence to traditional ritual is lax, and when the young are able with impunity to short-cut both the tedious formalities and the great expenses of the most approved form of marriage. In this form of marriage cattle are still claimed by the bride's father, or by the former husband in the case of divorce and remarriage, but they are fewer in number. The essential differences from the first type of marriage are that the bride loses her virginity before any sort of marriage negotiation has taken place between the two families, and the contract eventually made between them is a recognition of a *fait accompli* instead of the careful planning of a mutually approved match.

A dead man's widows are normally taken up by his kinsmen at the final ceremonies of the funeral, a year or more after the death. These kinsmen are nearly always husband's brothers or stepsons to the widows and they would certainly never be kinsmen from outside the dead man's minimal class A lineage; but the Luo do not consciously relate the matter of widow inheritance to a specific grade of lineage. Among their husband's close kinsmen widows are allowed considerable freedom of choice. It was considered desirable that a man should replace a wife who had died, or a wife who was barren, by a sister of hers, which he could usually do for an amount of bridewealth far smaller than that of the original marriage. Ritual offences rather than infidelities were considered grounds for divorce. If the wife was judged guilty the husband claimed back the bridewealth cattle, less deductions of one head for the wife's work during the marriage, two for each girl, and three for each boy born of it, and others to replace those consumed in the marriage ceremonies. But if the husband was at fault he might be prevented from claiming any cattle back by a brother demanding the woman in his stead.

As has been stated, the cattle of a homestead are all herded together, but there are clearly recognized divisions in the ownership of the herd. There are three main categories: the cattle owned by the father, the cattle owned by his wives, and the cattle held in trust by them for the marriages of their sons. Though the father cannot interfere with the two latter categories except by agreement, he is regarded none the

17: Southall E-5 (1946-1947) 1952 FL11 Luo FL11

less as titular owner of the whole herd. The scheme of division may be represented as in the diagram below. All other livestock is divided in the same way. The eldest son of the first wife must marry before any other sons can do so, and if the first wife has no sons the rest must wait till there is no further chance of her bearing any. When the first wife dies, the second wife becomes chief wife of the homestead, but a first wife's full status can only be succeeded to when she is replaced by a sister and a new homestead is built. The property of a barren wife is inherited by a stepson who is adopted into her household to do the man's work in it.

CATTLE HERD

All herded together

Head of homestead titular owner of all

1. *Cattle of the abila*
Strict property of homestead head.

Used to help sons or brothers' sons to marry, or to marry new wives for homestead head.

Residue ultimately inherited by the youngest son of the homestead, who also takes the father's share of cattle from any subsequent marriages of sisters.

All derived from the heifer and bull taken by the father at every daughter's marriage, and from their increase.

Milk from these used by the homestead head.

Cattle of the wives' houses
Most to *mikayi*, next to *nyarbiru*, rest among *rero* wives.

2. Cattle strictly property of the wives.

Ultimately inherited by youngest son of each house.

All derived from the heifer called *rech kode* received by the mother at each daughter's marriage, and from the heifer of *atoke* and bull settled upon a wife by her father at the end of her marriage ceremonies.

Milk from these used by the wives.

3. Cattle held for sons' marriages.

Any residue inherited by youngest son of each house.

All derived from the cattle received at *daughters'* marriages other than those specified under 1 and 2.

Homestead head has over all discretion in the original division of accruing cattle, and can persuade wives to give up cattle from category 3 to help stepsons to marry, and may by agreement take an extra heifer from those received at a daughter's marriage, to complete the bridewealth of one of his other wives.

Succession to authority in the family, and also in the lineage, depends on a combination of three qualifications: primogeniture, personal suitability in character and wealth, and appointment by one's predecessor. Primogeniture is highly regarded and preferred, but is never an absolute rule. Whenever an eldest son is unsuitable, or another agnatic relative is clearly more suitable, the latter is chosen to succeed. But a successor must be named by his predecessor, and as a result of the strong common sentiments in family and lineage segment, the predecessor's appointee seems usually to have been the one whom the elders of the group wish to elect when they meet at the funeral of the predecessor to confirm his choice.

Ancestor worship is falling into abeyance among the Luo of today. All those who go to school become at least nominal Christians, and this affects most of the young, while the old are becoming diffident in the performance of rites which no longer command universal respect. The spirit shrines which used to be placed between the first and second wives' huts are hardly seen today, nor the three stones which used to stand before the spirit shrine, with the stone of sacrifice buried beneath (see
